Wetland

“Lungs of the Earth”	Reflects sunlight to keep the Earth cool	Huge source of minerals for life on Earth	The largest biome on Earth	Used for farming for thousands of years	A source of freshwater that humans can drink
	In danger of melting because of rising temperatures	Stores a lot of carbon	Home of the coral reefs, which support so many animals	Every continent on Earth, except Antarctica, has this biome	Can help stop floods
					

					
Stores a lot of carbon and releases oxygen
